🕒 EXPERIENCE

Product Manager II | Product Lead — Operations

🏢 Active Environmental

📍 Provo, UT

📅 August 2023 – May 2026

Owned product strategy for Active's operational backbone—designing scalable systems for scheduling, route optimization, compliance, and workforce planning that transformed how the business operates nationwide.

- Directed development of the Field Ops and Licensing modules within Project Cleo, Active's next-generation enterprise platform unifying CRM, Sales, Operations, and Compliance supporting over \$500 million in annual revenue.
- Integrated AI-assisted development workflows for code generation, automated testing, and API documentation—reducing delivery timelines by 40% and accelerating platform deployment.
- Defined product vision for intelligent scheduling, routing, credential enforcement, and workforce capacity planning systems supporting 3.5M+ annual appointments.
- Championed user-centered design, integrating field research and usability testing to drive adoption and streamline workflows for thousands of technicians and managers.
- Established shared design systems and reusable components, ensuring cross-app consistency and faster feature delivery.
- Delivered \$4.5M+ in projected annual savings through automation, workflow optimization, and AI-driven execution.

Product Manager

🏢 Legrand | North America

📍 Pleasant Grove, UT

📅 May 2021 – August 2023

Directed cross-platform product development for Legrand's lighting control ecosystem, turning technically complex calibration and setup workflows into intuitive, reliable user experiences that improved efficiency in the field.

- Redesigned Legrand's DLM Config mobile app, cutting setup time by 50% and improving field technician efficiency through simplified workflows and UX innovation.
- Led cross-functional development across mobile, desktop, and web apps, aligning strategy and execution across the full DLM product ecosystem.
- Applied user research and field testing to uncover key friction points, transforming complex calibration workflows into intuitive, reliable experiences.
- Stabilized a legacy Xamarin codebase, reducing crashes and restoring trust among field users and sales engineers.
- Implemented agile processes and improved DevOps visibility, enhancing delivery predictability and cross-team communication.
- Presented product improvements at Legrand's annual sales conference, driving adoption and unifying design patterns across platforms.

Product Management Contractor & UX Designer

🏢 Warren Design

📍 Santaquin, UT

📅 March 2019 – May 2021

Helped organizations shape better digital products through market validation, user research, workflow design, and rapid prototyping—bridging business goals with thoughtful product execution.

- Assessed client projects to determine viability/marketability and validate case for ROI.
- Conducted critical user research/interviews in order to gain insight & empathy regarding problems facing customers.
- Determined core feature sets and sketched workflow rough drafts for UX enhancements for client software.
- Evaluated old UX in contrast with new UX to demonstrate usability improvements and design enhancements.
- Created prototypes of client products using UX design software to validate design with users and improve client/user satisfaction by 98%.
- Generated and transferred style guides, color palettes, and other assets to engineering teams with a 100% success rate.
